

APEX TOLL TERMINAL

TOUCH TERMINAL SPECIFICATIONS

Touch-screens are state-of-the-art in Point-of-Sale systems. Casetta APEX Toll Terminal application allows operators to add a touch terminal to any APEX Lane controller, or the application may be run stand-alone on any Java-enabled computer.

The system reports user activity in real-time to the APEX application, as well as caching information locally for use in canned or custom reports.

The Touch Terminal application uses the Open-Standard CORBA interface to communicate with the APEX application and remote systems.

The application allows Operators to easily configure screens, buttons, color schemes and operating rules.

The application also provides for interfaces to external automatic cash drawers, receipt printers and patron displays.

FEATURES

- Application runs on both Windows and Linux
- User defined button layout (color, size, etc)
- Serial or Ethernet Interfaces
- Guaranteed message delivery on a CORBA interface
- Local message caching
- Configurable audio feedback, with user controlled volume
- Application will monitor system internal temperatures, fan speed, and voltages (if the processor is equipped) and report the statistics
- Authorized users can re-baseline the touch screen without having to exit to the Operating System
- Support for hand-held bar-code scanner
- Automatic screen saver to prevent burn-in
- Support for automatic back-light controls
